

We work with One Tree Planted to plant two trees for each invoice paid, one from us and one from you.

Hi Joe,

As promised some info on our power. We are currently signed up with EFD Energy who supply power to our museums and we are on their zero carbon for business plan.

### How does Zero Carbon for Business work?

1. Energy sources

Electricity is generated from a variety of sources, including zero carbon nuclear power.

2. National Grid

Electricity is then transmitted through the National Grid and through your local distribution network.

3. Your business

Then we supply the electricity to your business.

We can't identify what particular type of energy generation source your electricity is coming from. That's why we match the electricity we estimate your business has used from a zero carbon source(1). In this case, that's nuclear.

Please see link below for more info.

Energy Sources | EDF ([edfenergy.com](https://www.edfenergy.com))

I hope this helps.

Best

Sam
